

Statistical bulletin

# Construction output in Great Britain: August 2018

Short-term measures of output by the construction industry in Great Britain and contracts awarded for new construction work in the UK.

3. [Construction output in August 2018](#)
4. [Contributions to growth](#)
5. [Detailed growth rates](#)
6. [Revisions](#)
7. [Links to related statistics](#)
8. [Other useful links](#)
9. [Quality and methodology](#)
10. [Construction statistics engagement and development](#)

## 1 . Main points

- Construction output continued to recover following a relatively weak start to the year, increasing by 2.9% in the three months to August 2018.
- The three-month on three-month growth in August 2018 was driven by both repair and maintenance and all new work which increased by 2.8% and 2.9% respectively.
- Construction output declined by 0.7% between July and August 2018, driven by falls in both repair and maintenance and all new work which decreased by 0.6% and 0.8% respectively.
- Estimates in this release are consistent with the [GDP quarterly national accounts, UK: April to June 2018](#) publication released on 28 September 2018. This includes the use of VAT turnover data for Quarter 1 (Jan to Mar) 2018 for the first time.

## 2 . Things you need to know about this release

The monthly business survey, Construction output, collects output by sector from businesses in the construction industry within Great Britain. Output is defined as the amount chargeable to customers for building and civil engineering work done in the relevant period excluding Value Added Tax (VAT) and payments to sub-contractors.

The survey's results are used to produce seasonally adjusted monthly, quarterly and annual estimates of output in the construction industry at current price and at chained volume measures (removing the effect of changes in price). The estimates are widely used by private and public sector institutions, particularly by the Bank of England and Her Majesty's Treasury, to assist in informed decision-making and policy-making. Construction output is an important economic indicator and is also therefore used in the compilation of the output measure of gross domestic product (GDP).

Summary information can be found in the [Construction output Quality and Methodology Information report](#).

Compared with the previous [Construction output in Great Britain: July 2018](#) publication released on 10 September 2018, this October 2018 release contains revisions in the back series of construction output estimates from January 2017 onwards. This is to ensure consistency with the [Quarterly National Accounts, UK: April to June 2018](#), released on 28 September 2018, which included revisions to construction output from 2017 Quarter 1 (Jan to Mar) to 2018 Quarter 2 (Apr to June).

This August 2018 release represents the fourth monthly construction output release in which the new improved methodology has been used to impute data for businesses that have not yet returned their Office for National Statistics (ONS) survey, along with a further adjustment to address any bias in early survey responses for construction output. Full details of these improvements can be found in [Improvements to construction statistics: Addressing the bias in early estimates of construction output, June 2018](#).

## 3 . Construction output in August 2018

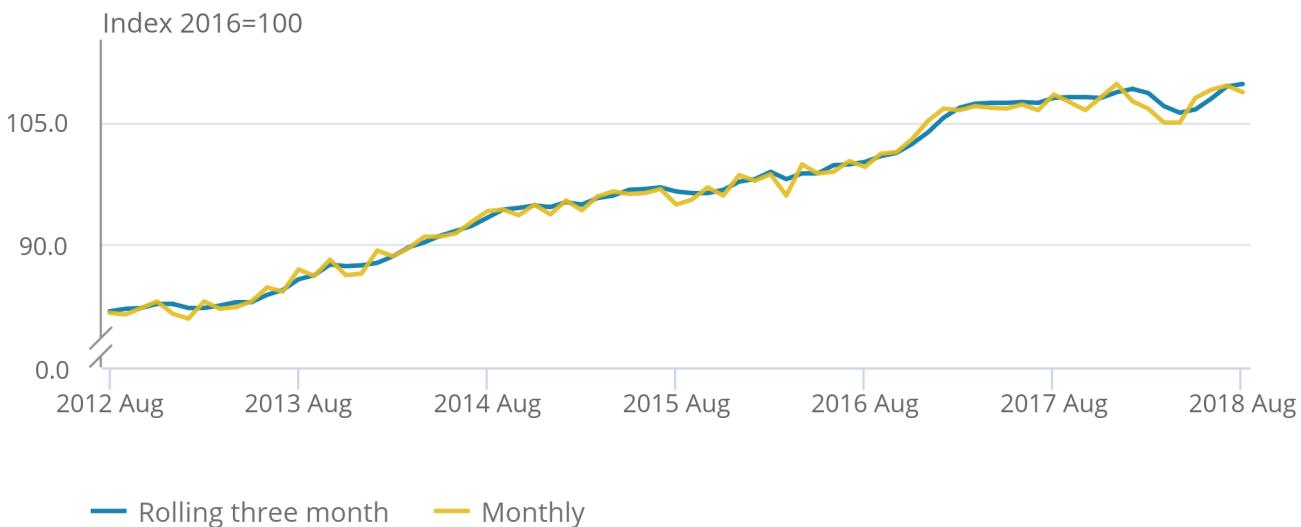

Construction output increased by 2.9% in the three months to August 2018, as the industry continues to recover following a weak start to the year. The three-month time series provides a more comprehensive picture of the underlying trends within the industry, compared with the more volatile monthly series, which is also shown in Figure 1.

**Figure 1: Rolling three-month and monthly all work, August 2018**

**Chained volume measure, seasonally adjusted, Great Britain**

### Figure 1: Rolling three-month and monthly all work, August 2018

Chained volume measure, seasonally adjusted, Great Britain

**Source: Construction Output and Employment - Office for National Statistics**

Following a marked fall in the rolling three-month series at the beginning of 2018, construction output continued to recover in the three months to August 2018. Due to the revisions, highlighted in Section 6, the new record high in the monthly all work series is now December 2017. In comparison to the lowest point in the last five years, September 2013, this new record high is 27.2% above this lowest point. Despite the month-on-month decrease for August 2018, construction output remains 26.0% above this lowest point.

## 4 . Contributions to growth

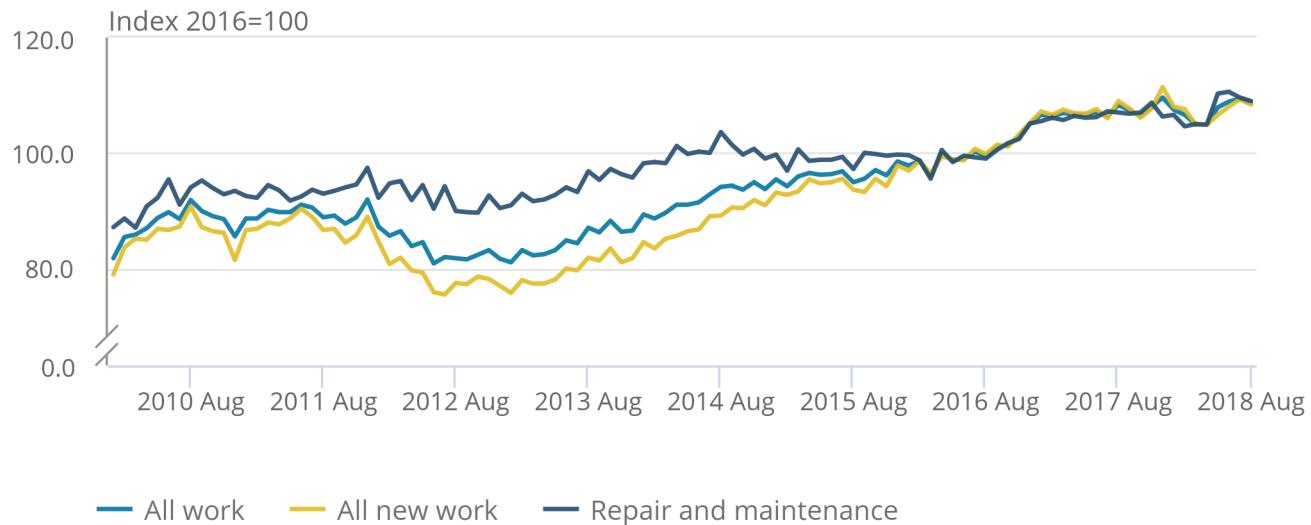

Construction output can be broken down by different types of work; these are categorised into all new work, and repair and maintenance, as shown in Figure 2. It is worth noting that all new work accounts for approximately two-thirds of all work, while repair and maintenance accounts for approximately one-third.

**Figure 2: Components of all work, August 2018**

**Chained volume measure, seasonally adjusted, Great Britain**

## Figure 2: Components of all work, August 2018

Chained volume measure, seasonally adjusted, Great Britain

**Source: Construction Output and Employment - Office for National Statistics**

Figure 2 shows that since the beginning of 2015, new work, and repair and maintenance have followed a broadly similar pattern. Both repair and maintenance, and new work have risen steadily.

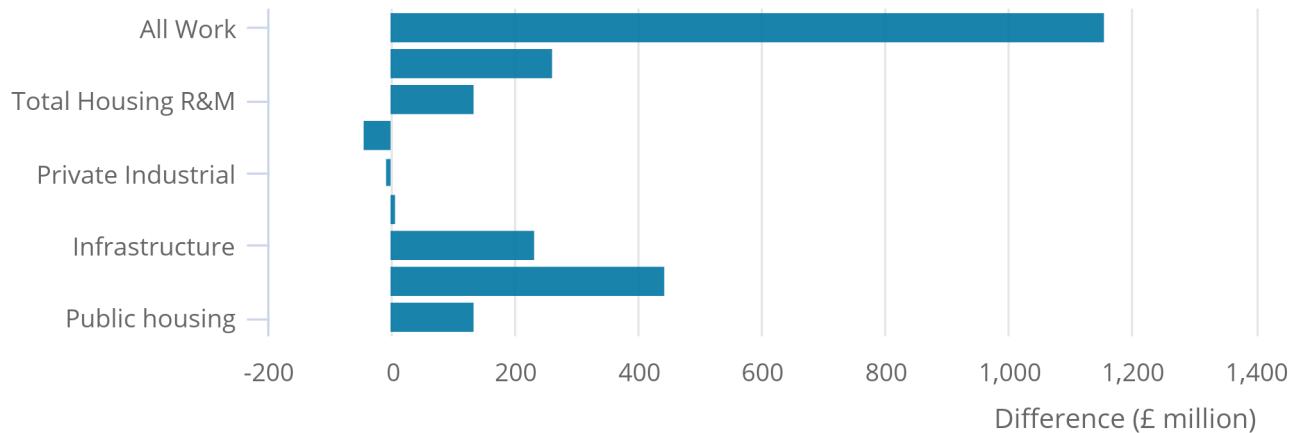

Following three consecutive months of contraction in the all new work month-on-month series at the start of 2018, construction output has bounced back. However, following growth of 2.8% in May, 0.9% in June 2018 and 0.5% in July, construction output decreased by 0.7% in August 2018. The month-on-month decrease in construction output in August 2018 stemmed from a decrease in both all new work and repair and maintenance which decreased 0.8% and 0.6% respectively in comparison with July 2018.

**Figure 3: Difference in three-month on three-month seasonally adjusted chained volume measure from the main construction sectors**

Great Britain, June to August 2018 compared with March to May 2018

Figure 3: Difference in three-month on three-month seasonally adjusted chained volume measure from the main construction sectors

Great Britain, June to August 2018 compared with March to May 2018

**Source:** Construction Output and Employment - Office for National Statistics

**Notes:**

1. Please note that sector estimates may not sum due to rounding.

Figure 3 shows the difference in the three-month on three-month growth from the different construction sectors, taken from our seasonally adjusted chained volume measure series.

Construction output increased by £1,156 million in the three months to August 2018. The most notable contribution to growth came from private housing new work, which increased by £442 million in the three months to August 2018. In addition, other notable three-month on three-month growth came from non-housing repair and maintenance and infrastructure, increasing by £262 million and £232 million respectively.

In contrast, the only sectors to provide downward pressure on output in the three months to August 2018 came from private commercial new work and private industrial new work, which had small falls in the three-month on three-month series, decreasing by £45 million and £9 million respectively in August 2018.

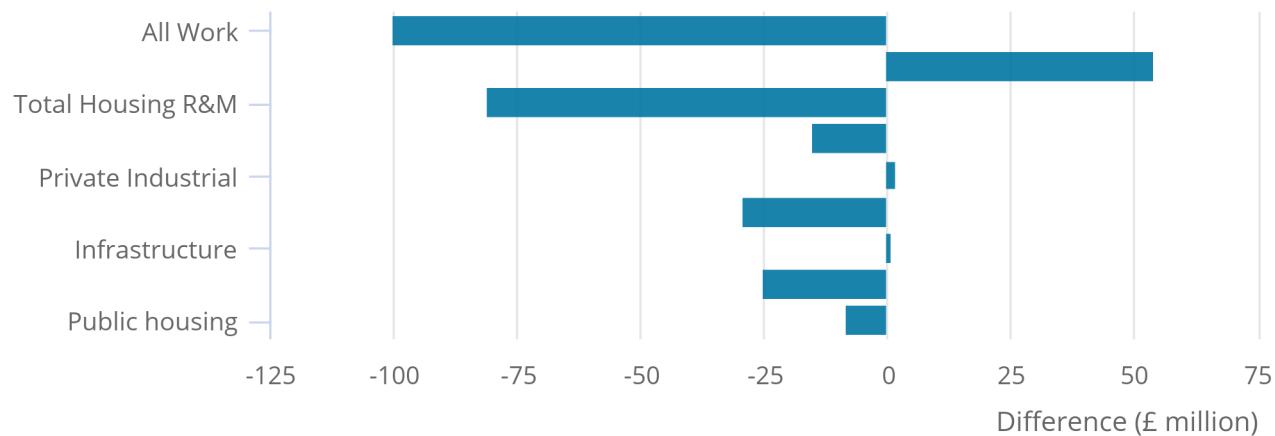

As indicated in the construction output in Great Britain for [March 2018](#) publication, the adverse weather for this month potentially contributed to the three-month on three-month growth in August 2018, although it is difficult to quantify the exact impact on the industry.

**Figure 4: Difference in month-on-month seasonally adjusted chained volume measure from the main construction sectors**

August 2018 compared with July 2018, Great Britain

## Figure 4: Difference in month-on-month seasonally adjusted chained volume measure from the main construction sectors

August 2018 compared with July 2018, Great Britain

Source: Construction Output and Employment - Office for National Statistics

Notes:

1. Please note that sector estimates may not sum due to rounding.

Figure 4 shows the difference in month-on-month growth from the different construction sectors, taken from our seasonally adjusted chained volume measure series. Compared with the previous month, construction output decreased by £100 million in August 2018.

The most notable decrease came from housing repair and maintenance, which decreased by £81 million in August 2018. Of this fall, private housing repair and maintenance contributed significantly with a £83 million decrease. This more than offset the £54 million increase in non-housing repair and maintenance. The other notable contributions to month-on-month decrease came from public other new work and private housing new work, decreasing by £29 million and £25 million respectively in the month-on-month series in August 2018.

## 5 . Detailed growth rates

Table 1 provides a detailed description of the growth rates of each work type, alongside the seasonally adjusted chained volume measure level of output.

Table 1: Construction output main figures, August 2018, Great Britain  
Seasonally adjusted, volume £ million and percentage change

	Volume £ million	Most recent month on the previous month	Most recent month on year	Most recent three-months on three-months earlier	Most recent three-months on year
Total all work	13,735	-0.7	0.3	2.9	1.6
Total all new work	8,960	-0.8	-0.6	2.9	1.0
Total repair and maintenance	4,774	-0.6	1.9	2.8	2.7
New housing					
Public	507	-1.6	-4.4	9.5	-1.4
Private	3,113	-0.8	7.4	5.0	8.2
Other new work					
Infrastructure	1,698	0.1	3.4	4.7	4.9
Excl infrastructure					
Public	763	-3.7	-15.7	0.3	-12.9
Private industrial	418	0.4	2.6	-0.8	3.8
Private commercial	2,461	-0.6	-6.4	-0.6	-4.7
Repair and maintenance					
Public housing	630	0.2	2.4	5.3	1.0
Private housing	1,731	-4.6	-5.0	0.8	-0.6
Non-housing repair and maintenance	2,413	2.3	7.4	3.8	5.8

Source: Office for National Statistics

Total all work decreased to £13,735 million in August 2018. This decrease stems from falls in both all new work and repair and maintenance, which fell to £8,960 million and £4,774 million.

In comparison with August 2017, construction output grew 0.3%. This month-on-year increase occurred as a result of a 1.9% increase in repair and maintenance which more than offset the 0.6% fall in the all new work series. The most notable contributions to month-on-year growth came from private housing new work and non-housing repair and maintenance with both growing by 7.4%. In contrast, compared with the same period in 2017, the public other and private commercial new work sectors continued their month-on-year declines falling by 15.7% and 6.4% respectively. This represents a 17th consecutive fall in the month-on-year series for public other new work and a ninth consecutive fall in the series for private commercial new work.

Following increases in June and July 2018, construction output continued to grow for August 2018 by 1.6% in the three-month on year series. The 8.2% and 5.8% three-month on year growth in private housing new work and non-housing repair and maintenance for August 2018 more than outweighed the 12.9% and 4.7% falls in public other and private commercial new work respectively.

## 6 . Revisions

This is the first monthly release to incorporate the revisions made in the [GDP quarterly national accounts, UK: April to June 2018](#) published on 28 September. As a result, revisions have been made back to January 2017, resulting from improvements to nominal data by incorporating the latest survey and VAT turnover data. As a result this has also impacted on the seasonal adjustment. This monthly release is also the first time in which VAT turnover data for 2018Q1 has been used to replace survey returns in the monthly data. This represents approximately 85,000 businesses with VAT turnover data replacing 2,400 survey returns in the monthly construction output sample. For a list of those industries selected to use VAT turnover within construction please see the [VAT industry selection matrix](#).

The revisions to the calendar quarter chained volume measure, seasonally adjusted series along with an indication of the main causes of the quarterly revisions are outlined in Table 2 below. This is comparing the previous [Construction output in Great Britain: July 2018](#) publication released on 10 September 2018 against today's (10 October 2018) publication.

Table 2: Comparison of published calendar quarter chained volume measure, seasonally adjusted Great Britain, Quarter 1 (January to March) 2018 to Quarter 2 (April to June) 2018

Quarter	Publication			Indicative cause of revision
		Previously published (10 Sep)	Latest publication (10 Oct)	
2017Q1	3.2	3.4	+0.2pp	Seasonal adjustment
2017Q2	0.4	0.2	-0.2pp	Seasonal adjustment
2017Q3	0.4	0.5	+0.1pp	Survey data
2017Q4	0.3	0.6	+0.3pp	Mainly seasonal adjustment with minimal revision to nominal data (both survey and VAT turnover)
2018Q1	-0.8	-1.6	-0.8pp	VAT turnover data
2018Q2	0.9	0.8	-0.1pp	Survey data

Source: Office for National Statistics

The most significant revision to quarterly growth can be seen in Quarter 1 (Jan to Mar) 2018, which has been revised downwards by 0.8 percentage points, from negative 0.8% to negative 1.6%. This revision has been predominantly caused by including VAT turnover data for the first time for the quarter. This is the only quarter to have an impact on GDP and was the main driver as to why Quarter 1 2018 was revised down by 0.1 percentage points to 0.1% in the quarterly national accounts published on 28 September.

While the inclusion of VAT turnover data has caused revisions to the monthly data in Quarter 1 2018, the general picture of the monthly path has remained broadly similar to that previously published, with revised monthly growth of negative 1.9% in January, negative 0.9% in February and negative 1.6% in March. This reiterates the weakness across all months of the quarter following a record high in the level of the series in December 2017.

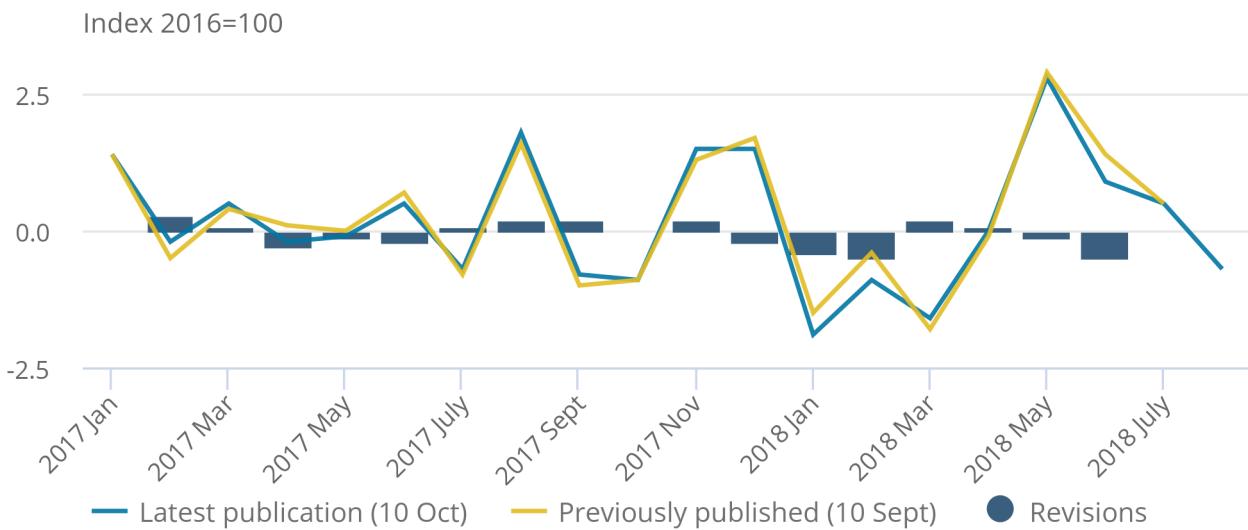

Figure 5 shows the comparison of month-on-month, chained volume measure seasonally adjusted growth rates for all construction work, comparing the previous publication with the latest publication from January 2017 to August 2018.

**Figure 5: Comparison of published month-on-month growth, all work series**

**Chained volume measure, seasonally adjusted, Great Britain, January 2017 to August 2018**

## Figure 5: Comparison of published month-on-month growth, all work series

Chained volume measure, seasonally adjusted, Great Britain, January 2017 to August 2018

**Source:** Construction Output and Employment - Office for National Statistics

In addition to the revisions to construction output first published within [Quarterly National Accounts, UK: April to June 2018](#), released on 28 September 2018 this publication also includes revisions to the July 2018 construction output estimate. July 2018 has an unrevised growth rate of 0.5% at the all-work level for the month on month volume, seasonally adjusted series, however at the sector level revisions can be seen.

## 7 . Links to related statistics

Output in the construction industry follows the [Eurostat Short Term Statistics \(STS\)](#) regulation for production in construction. Headline volume estimates of construction output are assessed against [Eurostat's handbook on price and volume measures in National Accounts](#). Before any comparisons are made with the Euro area or EU28, it is worth noting that the UK is the only member state to follow the A method for compiling [production in construction statistics](#).

The latest release of Production in construction, published by Eurostat on 19 September 2018 for July 2018, showed the seasonally adjusted [production in the construction sector](#) increased by 0.3% in the Euro area (EA19) and increased by 0.4% in the EU28 when compared with June 2018.

It should be noted that an accurate comparison cannot be made, as Eurostat data are calculated on a 2015 equals 100 basis, while Great Britain data are calculated on a 2016 equals 100 basis.

Outside the EU, the US Census Bureau release [Value of construction put in place \(PDF, 220.5KB\)](#) was published on 1 August 2018. This includes the total dollar value of construction work done in the US.

[The Construction statistics: Number 19, 2018 edition](#) was published on 22 August 2018. This publication contains analysis on the construction sector in 2017, as well as information on [sources and outputs in the industry](#).

## 8 . Other useful links

- [Ministry of Housing, Communities and Local Government](#) (Housing starts and completions)
- [Construction statistics in Northern Ireland](#)

## 9 . Quality and methodology

Our Monthly Construction Output Survey measures output from the construction industry in Great Britain. It samples 8,000 businesses, with all businesses employing over 100 people or with an annual turnover of more than £60 million receiving a questionnaire by post every month.

The [Construction Quality and Methodology Information](#) report contains important information on:

- the strengths and limitations of the data and how it compares with related data
- uses and users of the data
- how the output was created
- the quality of the output including the accuracy of the data

The New orders in construction [Quality and Methodology Information](#) report provides similar information for the new orders data.

Value Added Tax (VAT) turnover has been used to estimate the output of small- and medium-sized businesses. In this release, VAT turnover has been used for selected industries previously covered by the Monthly Business Survey from Quarter 1 (Jan to Mar) 2016 to Quarter 1 (Jan to Mar) 2018. In line with [Quarterly National Accounts, UK: April to June 2018](#), released on 28 September 2018, VAT data has now been included in construction output estimates for Quarter 1 2018 for the first time. This is the firstly monthly output release to include VAT turnover data for Quarter 1 2018.

Further information on the use of VAT turnover and its impact can be found in the following articles:

- [VAT turnover implementation into national accounts article](#)
- [VAT turnover data in national accounts: background and methodology](#)

## 10 . Construction statistics engagement and development

On 11 December 2014, the UK Statistics Authority announced its decision to suspend the designation of Construction output and New orders as [National Statistics](#) due to concerns about the quality of the [Construction Price and Cost Indices](#) used to remove the effects of inflation from the statistics.

We took responsibility for the publication of the Construction Price and Cost Indices from the then [Department for Business, Innovation and Skills \(BIS\)](#) on 1 April 2015, introducing an interim solution for measuring output prices in June 2015 for all periods from January 2014 onwards.

As part of the ongoing ONS construction statistics development programme, we have worked closely with the Construction Statistics Steering Group. This group provides a forum for ONS to engage with main users of construction statistics on the development of ONS-published construction statistics, including other government departments, industry experts and academics, to identify areas for improvement.

In September 2017, we released the [impact of improvements to construction statistics article](#), which explains and highlights the impact of improvements made to construction statistics, affecting the nominal data series, output price indices and seasonal adjustment. As a result of these improvements, the output price indices are no longer considered to be an interim method.

In addition to the improvements made in September 2017, we have since announced two further methodological improvements to construction output estimates, which have since been implemented, detailed in the two articles:

- [Improvements to addressing the bias in early estimates of construction output](#), which were incorporated for the first time in the Quarterly national accounts: January to March 2018 on 29 June 2018
- [Improvements to regional and sub-sector level estimates](#) using new orders data supplied by Barbour ABI, which were incorporated for the first time in the [Construction output in Great Britain: April 2018](#) publication.

The overall [impact of the improvements to construction statistics](#) that were included in [Quarterly national accounts: Jan to Mar 2018](#) are outlined in the article released on 29 June 2018.

The Office for Statistics Regulation is currently in the process of re-assessing the National Statistic status for construction statistics: Output, New orders and Price indices.

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.

# 1.A.M CONSTRUCTION OUTPUT: VOLUME SEASONALLY ADJUSTED INDEX NUMBERS BY SECTOR

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.

# **3B.M CONSTRUCTION OUTPUT: VOLUME SEASONALLY ADJUSTED PERCENTAGE CHANGE ON SAME PERIOD A YEAR EARLIER**

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.

Users of these data should note that there may be instances where the period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.
