

Statistical bulletin

Retail sales, Great Britain: August 2016

A first estimate of retail sales in volume and value terms, seasonally and non-seasonally adjusted.

13. [Background notes](#)

1 . Main points

In August 2016, the quantity bought (volume) of retail sales is estimated to have increased by 6.2% compared with August 2015; all store types except textile, clothing and footwear, and household goods showed growth with the main contribution coming from food stores.

The quantity bought decreased by 0.2% compared with July 2016; the largest contribution to the decrease came from non-food stores which was offset by increases in non-store retailing, predominantly food stores and petrol stations.

The underlying pattern in the retail sector is still one of growth with the 3 month on 3 month movement in the quantity bought increasing by 1.6%.

The amount spent (value) in the retail industry increased by 4.1% compared with August 2015 and decreased by 0.5% compared with July 2016.

The amount spent online increased by 18.5% compared with August 2015 and increased by 0.4% compared with July 2016.

Non-seasonally adjusted average store prices (including petrol stations) fell by 1.9% in August 2016 compared with August 2015.

2 . Things you need to know about this release

This bulletin presents estimates of the quantity bought (volume) and amount spent (value) in the retail industry for the period 31 July 2016 to 27 August 2016. Unless otherwise stated, the estimates in this release are seasonally adjusted.

The estimates are based on a monthly survey of 5,000 retailers, including all large retailers employing 100 people or more and those with annual turnover of greater than £60 million who employ 10 to 99 people. It is estimated that this survey covers approximately 95% of all known retail turnover in Great Britain.

The quality of the estimate of retail sales

Retail sales estimates are produced from the Monthly Business Survey – Retail Sales Inquiry (RSI). The timeliness of these retail sales estimates, which are published just 3 weeks after the end of each trading period, makes them an important early economic indicator. The industry as a whole is used as an indicator of how the wider economy is performing and the strength of consumer spending. Current price non-seasonally adjusted data are revised for the previous 13 published periods. More information about the data content for this release can be found in the background notes.

Revisions are an inevitable consequence of the trade-off between timeliness and accuracy. The response rate in August 2016 was 59.5% of questionnaires, accounting for 89.2% of registered turnover in the retail industry. Therefore, the estimate is subject to revisions as more data become available.

All estimates, by definition, are subject to statistical uncertainty and for the retail sales index we publish the standard error associated with the non-seasonally adjusted estimates of year-on-year and month-on-month growth in the quantity bought as a measure of accuracy. More information on these standard errors can be found in the background notes and in the [quality tables](#) of this release.

We are continually working on methodological changes to improve the accuracy of the retail sales estimates; progress on these can be found on the [continuous improvement page](#).

The [datasets](#) offer different ways to access the data, they include:

- non-seasonally adjusted and seasonally adjusted volume and value indexes by industry
- year-on-year and month-on-month growth rates by industry

3 . Main figures

Table 1: Main figures, August 2016

Seasonally adjusted sales volumes, Great Britain

	Most recent month on a year earlier	Most recent 3 months on a year earlier	Most recent month on previous month	Most recent 3 months on previous 3 months
Value (amount spent)	4.1	3.0	-0.5	1.5
Volume (quantity bought)	6.2	5.5	-0.2	1.6
Value (excluding automotive fuel)	3.9	2.9	-0.6	1.3
Volume (excluding automotive fuel)	5.9	5.1	-0.3	1.7

Source: Monthly Business Survey – Retail Sales Inquiry, Office for National Statistics

At a glance

In August 2016:

the quantity bought in the retail industry (volume):

- increased by 6.2% compared with August 2015; the 40th consecutive period of year-on-year growth
- decreased by 0.2% compared with July 2016

the amount spent (value):

- increased by 4.1% compared with August 2015
- decreased by 0.5% compared with July 2016

In the 4 week reporting period during August 2016, the amount spent in the retail industry was £28.6 billion (non-seasonally adjusted).

This compares with:

- £29.8 billion in the 4 week reporting period for July 2016
- £27.5 billion in the 4 week reporting period for August 2015

This equates to an average weekly spend of:

- £7.1 billion in August 2016
- £7.4 billion in July 2016 and
- £6.9 billion in August 2015

4 . Sector summary

Main points

In August 2016:

- all store types except textile, clothing and footwear, and household goods stores showed increases in the quantity bought and amount spent compared with August 2015
- the quantity bought in household goods contracted year-on-year for the first time since May 2014
- non-seasonally adjusted data show that the prices of goods sold in the retail industry (as measured by the implied price deflator) decreased by 1.9% compared with August 2015; this was the 26th consecutive month of year-on-year price falls
- compared with August 2015 there were falls in average store prices across all store types, with the largest fall in petrol stations (2.5%); however, the fall of 1.9% in all retailing is the smallest fall we have seen since November 2014
- compared with July 2016 average store prices have increased by 0.2%, with the largest increase seen in textile, clothing and footwear stores (0.9%)

Table 2: Sector summary, August 2016

Seasonally adjusted, Great Britain

	Percentage change over 12 months			Average weekly sales (£ billion)
	Quantity bought (volume)	Amount spent (value)	Average store price	
Predominantly food stores ¹	5.9	3.7	-2.0	2.9
Predominantly non-food stores ²	3.8	2.0	-1.6	3.0
Non-specialised stores ³	9.0	6.9	-1.9	0.6
Textile, clothing and footwear stores	-3.0	-4.3	-1.4	0.9
Household goods stores	-0.5	-2.5	-1.9	0.6
Other stores	9.8	8.0	-1.4	0.9
Non-store retailing	17.1	15.1	-1.6	0.5
Fuel stores	9.0	6.2	-2.5	0.7
Total	6.2	4.1	-1.9	7.1

Source: Monthly Business Survey – Retail Sales Inquiry, Office for National Statistics

Notes:

1. Supermarkets, specialist food stores and sales of alcoholic drinks and tobacco.
2. Non-specialised stores, textiles, clothing and footwear, household goods and other stores.
3. Department stores.

More information on how the implied price deflator and other estimates in this release are calculated can be found in section 2 part iii of the background notes.

5 . Focus on department stores (non-specialised stores)

Figure 1: Quantity bought, amount spent and average store price in department stores, January 2010 to August 2016

Seasonally adjusted sales volumes, Great Britain

Figure 1: Quantity bought, amount spent and average store price in department stores, January 2010 to August 2016

Seasonally adjusted sales volumes, Great Britain

Source: Monthly Business Survey – Retail Sales Inquiry, Office for National Statistics

Source: Monthly Business Survey – Retail Sales Inquiry, Office for National Statistics

Figure 1 shows the longer-term picture for quantity bought, amount spent and average store price in department stores. In the early part of the time series while the amount spent increased, the quantity bought was fairly flat due to a similar increase in the average price of goods. However, since late 2012 there was sustained growth in both the quantity bought and amount spent. During the same period average prices in store fell slightly, with 26 consecutive months of year-on-year price falls to August 2016.

The index level for both quantity bought and amount spent is now at its highest level since records began, suggesting that consumers have taken advantage of falling prices in department stores.

Table 3: Summary of growth in department stores, August 2016

Year-on-year and month-on-month, Great Britain

	Year-on-Year	Month on Month
Quantity Bought (SA)	9.0	0.8
Amount spent (SA)	6.9	0.5
Average store price (NSA)	-1.9	0.5

Source: Monthly Business Survey – Retail Sales Inquiry, Office for National Statistics

Notes:

1. SA = seasonally adjusted.
2. NSA = Non-seasonally adjusted.

Table 3 shows a summary of growth rates for department stores in August 2016. There was year-on-year and month-on-month growth in both quantity bought and amount spent in department stores. Feedback from retailers suggests that in-store promotions and back-to-school products have boosted sales.

6 . Internet sales in detail

Seasonally adjusted internet sales data are published in the Retail Sales Inquiry (RSI) [internet tables](#) and include:

- a seasonally adjusted value index
- year-on-year and month-on-month growth rates

Internet sales are estimates of how much was spent online through retailers across all store types in Great Britain. The reference year is 2013=100.

Main points:

- average weekly spending online in August 2016 was £965.8 million; this was an increase of 18.5% compared with August 2015
- the amount spent online accounted for 14.3% of all retail spending, excluding automotive fuel, compared with 12.5% in August 2015

Table 4 shows the year-on-year growth rates for total internet sales by sector and the proportion of sales made online in each retail sector.

Table 4: Summary of internet statistics, August 2016

Value seasonally adjusted, percentage rates, Great Britain

Category	Year-on-year growth	Sales as a proportion of all retailing	Index categories and their percentage weights
All retailing	18.5	14.3	100
All food	10.3	4.7	15.0
All non-food	14.0	10.9	36.1
Department stores	19.3	12.7	8.6
Textile, clothing and footwear stores	-9.0	12.6	13.9
Household goods stores	50.6	10.7	5.4
Other stores	28.0	8.2	8.3
Non-store retailing	24.8	76.3	49.0

Source: Monthly Business Survey – Retail Sales Inquiry, Office for National Statistics

7 . Contributions to growth

The retail industry is divided into 4 retail sectors:

- predominantly food stores (for example, supermarkets, specialist food stores and sales of alcoholic drinks and tobacco)
- predominantly non-food stores (for example, non-specialised stores such as department stores, textiles, clothing and footwear, household goods and other stores)
- non-store retailing (for example, mail order, catalogues and market stalls)
- stores selling automotive fuel (petrol stations)

Figure 2 shows that for every pound spent in the retail industry:

- 40 pence was spent in food stores
- 43 pence in non-food stores
- 8 pence in non-store retailing
- 9 pence in stores selling automotive fuel

Figure 2: Contribution from the 4 main sectors for every pound spent in the retail industry

Great Britain, August 2016

Figure 2: Contribution from the 4 main sectors for every pound spent in the retail industry

Source: Monthly Business Survey – Retail Sales Inquiry, Office for National Statistics

Source: Monthly Business Survey – Retail Sales Inquiry, Office for National Statistics

Notes:

1. Value (pence)

Using these as weights, along with the year-on-year growth rates, we can calculate how each sector contributed to the total year-on-year growth in the quantity bought.

Figure 3: Contributions to year-on-year volume and value growth from the 4 main retail sectors (August 2016 compared with August 2015)

Great Britain

Figure 3: Contributions to year-on-year volume and value growth from the 4 main retail sectors (August 2016 compared with August 2015)
Great Britain

Source: Monthly Business Survey – Retail Sales Inquiry, Office for National Statistics

Source: Monthly Business Survey – Retail Sales Inquiry, Office for National Statistics

In August 2016 compared with August 2015, all main retail sectors saw an increase in the quantity bought (volume) and amount spent (value). The largest contribution in the quantity bought and amount spent came from food stores. Average store prices have fallen across all store types in August 2016 compared with August 2015, resulting in consumers buying more goods.

Figure 4: Contributions to month-on-month volume and value growth from the 4 main retail sectors (August 2016 compared with July 2016)

Great Britain

Figure 4: Contributions to month-on-month volume and value growth from the 4 main retail sectors (August 2016 compared with July 2016)
Great Britain

Source: Monthly Business Survey – Retail Sales Inquiry, Office for National Statistics

Source: Monthly Business Survey – Retail Sales Inquiry, Office for National Statistics

In August 2016 compared with July 2016, non-food stores saw a decrease in the quantity bought (volume) and amount spent (value).

Compared with July 2016, there was an increase in average store price of 0.2%; there were increases in all store types except fuel. Non-store retailing showed no change.

8 . Distribution analysis

Table 5 shows how sales varied among different-sized retailers. It shows the distribution of reported change in sales values of businesses (from the RSI sample), ranked by size of business (based on number of employees).

Businesses with 40 to 99 employees saw the largest growth in the amount spent in August 2016 compared with August 2015 (13.2%). Businesses with 100 and over employees showed an increase of 4.1%.

Table 5: Distribution analysis, change in reported retail sales values between August 2015 and August 2016

Standard reporting periods, by size of business, Great Britain

Number of employees	Weights (%)	Growth since August 2015 (%)
100 and over	78.1	4.1
40 to 99	3.0	13.2
10 to 39	7.0	-7.2
0 to 9	11.9	1.1

Source: Monthly Business Survey – Retail Sales Inquiry, Office for National Statistics

Notes:

1. The table contains information only from businesses that reported in August 2015 and August 2016; it shows reported actual changes in their sales.

More information on the performance of the retail industry by store type and size can be found in the [Business Analysis](#) dataset.

9 . Economic context

Annual growth in retail sales volumes continued to strengthen in August 2016, extending the positive trend seen since mid-2013.

Figure 5 compares a rolling 3-month period with the same period in the previous year. The latest data show an increase in retail sales growth of 5.5% in the 3-months to August 2016, up from 5.3% in the 3-months to July. This takes the average growth rate of retail sales in 2016 to 4.4%, just below 2015's average of 4.5% (using the rolling 3-month period compared with a year ago measure).

Figure 5: 3-month on 3-month growth in retail sales, August 2007 to August 2016

Great Britain

Figure 5: 3-month on 3-month growth in retail sales, August 2007 to August 2016

Great Britain

Source: Monthly Business Survey – Retail Sales Inquiry, Office for National Statistics

Source: Monthly Business Survey – Retail Sales Inquiry, Office for National Statistics

Three distinct periods emerge from Figure 5. Between August 2007 and July 2008, retail sales volumes experienced continuous growth. Growth in [average weekly earnings](#) exceeded growth in inflation ([Consumer Prices Index](#)) over most of this period, which suggests an increase in the real earnings of consumers (and hence their purchasing power). Moreover, [consumer credit](#) also increased over this period, which may have contributed to retail sales growth.

In contrast, between August 2008 and May 2013, the volume of retail sales fluctuated between periods of contraction and expansion, which may be partly explained by the economic climate over this period (which included a contraction in consumer credit). Moreover, growth in average weekly earnings was lower than inflation over most of the period, which implies that earnings fell in real terms.

The third period shown in Figure 5 started in June 2013, when growth in volume terms began to increase notably, despite average weekly earnings growing at a slower rate than CPI until September 2014. This period of growth has been accompanied by an expansion of consumer credit as well as a decline in the saving ratio (from an average of 8.6% between 2008 and 2012 to an average of 6.5% between Quarter 1 (Jan to Mar) 2013 and Quarter 1 2016). Furthermore, between June 2013 and July 2016, the price level (measured by the implied deflator) fell by 5.4%, coinciding with 14.2% growth in the volume of retail sales over this period.

Figure 6 breaks down the growth in total retail sales into the contributions made by food and non-food stores (which includes department stores, other stores, clothing, and household goods), non-store retailing, and petrol, between August 2007 and August 2016. In the 9-year period, non-store retailing and non-food stores have contributed most to total growth (with non-store retailing being the only component to have made a consistently positive contribution). In the most recent period, all 4 components have made positive contributions to growth, with food and non-food stores contributing the most and petrol making sizeable contributions since the end of 2014 at a time of historically low oil prices.

In the latest month, growth continues to be driven by a broad-based increase in all 4 categories, but particularly in food and non-food stores, each contributing 1.8 percentage points to the 5.5% growth in retail sales in August.

Figure 6: Components of retail sales growth, August 2007 to August 2016

Great Britain

Figure 6: Components of retail sales growth, August 2007 to August 2016

Great Britain

Source: Monthly Business Survey – Retail Sales Inquiry, Office for National Statistics

Source: Monthly Business Survey – Retail Sales Inquiry, Office for National Statistics

Regarding the EU referendum in late June, our data on retail sales since the vote show little evidence of a departure from recent trends. This echoes findings by the [British Retail Consortium](#) (BRC), who reported strong growth in retail sales in July. For August, BRC reported a 0.3% drop in sales compared with August 2015, which was partially attributed to hot weather weighing down on non-food sales. This aligns with the 0.2% drop in retail sales month-on-month between July and August in our data.

10 . International data

The latest estimates for retail trade was published by the US Census Bureau on 12 August 2016 in its advanced [retail sales estimates for July 2016](#). They include the amount spent in the US retail industry, including motor vehicles and parts, and food services.

The [latest estimates of the volume of retail trade across the European Union](#), published by Eurostat on 5 September 2016 for July 2016, show the seasonally adjusted volume of retail trade in both the euro area (EA19) and EU28 when compared with May 2016. Note that an accurate comparison cannot be made as Eurostat data are calculated on a 2010 = 100 basis, while data for Great Britain are calculated on a 2013 = 100 basis.

11 . Changes to publication schedule for economic statistics

From January 2017 we are improving the way we publish economic statistics, with related data grouped together under new “theme days”. This will increase the coherence of our data releases and involve minor changes to the timing of certain publications. For more information see [Changes to publication schedule for economic statistics](#).

12 . Quality and methodology

The [Retail sales Quality and Methodology Information document](#) contains important information on:

- the strengths and limitations of the data and how it compares with related data
- users and uses of the data
- how the output was created
- the quality of the output including the accuracy of the data

1. Quality

i. Basic quality information

The standard reporting periods can change over time due to the movement of the calendar. Every 5 or 6 years the standard reporting periods are brought back into line by adding an extra week. For example, January is typically a 4 week standard period but January 1986, 1991, 1996, 2002, 2008 and 2014 were all 5 week standard periods. The non-seasonally adjusted estimates will still contain calendar effects. If the non-seasonally adjusted estimates are used for analysis, this can lead to a distortion depending on the timing of the standard reporting period in relation to the calendar, previous reporting periods and how trading activity changes over time.

The non-seasonally adjusted series contain elements relating to the impact of the standard reporting period, moving seasonality and trading day activity. When making comparisons, you should focus on the seasonally adjusted estimates as these have the systematic calendar-related component removed. Due to the volatility of the monthly data, growth rates should be calculated using an average of the latest 3 months of the seasonally adjusted estimates.

When interpreting the data, the relative weighted contributions of the sectors in the “all retailing” series should be considered. Based on SIC 2007 data, total retail sales consists of: predominantly food stores 40.4%, predominantly non-food stores 42.6%, non-store retailing 7.6% and automotive fuel 9.4%.

ii. Standard error

Standard errors determine the spread of possible movements and are a means of assessing the accuracy of the non-seasonally adjusted month-on-month and year-on-year estimates of all retail sales volumes. The lower the standard error, the more confident we can be that the estimate is close to the true value for the retail population.

The standard errors for August 2016 are undergoing further quality assurance. The quality tables and standard error presentation table will be available as soon as possible.

Table 6 shows the year-on-year movement for the non-seasonally adjusted chained volume measure alongside the standard error across the published sector breakdowns for July 2015 and July 2016. The differences between July 2015 and July 2016 highlight that the standard error has only increased for “household goods stores” while it has decreased or remained stable for other sector breakdowns. The greatest decreases are seen for “non-specialised stores”.

More information on standard errors can be found in the [Retail sales quality tables](#) datasets, which are part of this release.

Year-on-year estimates and standard errors: August 2015 and August 2016

Year-on-year estimates and standard errors: August 2015 and August 2016

Chained Volume measure, non-seasonally adjusted

Great Britain

Sector	August 2015		August 2016	
	12-month movement August 2015 (percentage change)	Standard error of 12-month movement, median (percentage points)	12-month movement August 2016 (percentage change)	Standard error of 12-month movement, median (percentage points)
All retailing	3.2	0.9	6	0.8
Predominantly food stores	1	0.6	5.8	0.6
Predominantly non-food stores	3.2	1.0	3.7	0.9
Non-specialised stores	4.4	1.7	9.1	1.4
Textile, clothing and footwear stores	2.4	1.2	-2.6	1.2
Household goods stores	4.5	2.0	-0.9	2.1
Other stores	2.4	2.4	9.7	2.0
Non-store retailing	12.6	5.3	17.1	5.0
Automotive fuel	6	4.0	8.8	3

Source: Office for National Statistics

iii. Revisions triangles

Revisions to data provide one indication of the reliability of main indicators. Table 6 shows summary information on the size and direction of the revisions made to the volume data covering a 5 year period. Note that changes in definition and classification mean that the revisions analysis is not conceptually the same over time.

Table 6: Revision triangles summary, August 2016

Volume seasonally adjusted, Great Britain

	Revisions between first publication and estimates 12 months later (percentage points)		
	Growth in latest period (%)	Average over the last 5 years (mean revision)	Average over the last 5 years without regard to sign (average absolute revision)
Latest 3 months compared with previous 3 months	1.6	-0.15	0.26
Latest month compared with previous month	-0.2	-0.08	0.32

Source: Monthly Business Survey – Retail Sales Inquiry, Office for National Statistics

The data section of this bulletin provides these estimates and the calculations behind the averages in the table.

2. Methods

Information on retail sales methodology is available on our website.

i. Composition of the data

Retail sales estimates are based on financial data collected through the monthly Retail Sales Inquiry. Response rates at the time of publication are included for the current month and the 3 months prior. The response rates for those historical periods are updated to reflect the current level of response, incorporating data from late returns. There are 2 response rates included with a percentage for the amount of turnover returned and another percentage for the amount of questionnaire forms. Historical response rates are available in the [quality information dataset](#).

Table 7: Overall response rates (%)

May to August 2016, Great Britain

Year	Period	Turnover	Questionnaire
2016	August	89.2	59.5
	July	97.8	73.6
	June	97.6	76.3
	May	96.8	77.1

Source: Monthly Business Survey – Retail Sales Inquiry, Office for National Statistics

ii. Seasonal adjustment

Seasonally adjusted estimates are derived by estimating and removing calendar effects (for example, Easter moving between March and May) and seasonal effects (for example, increased spending in January as a result of Christmas) from the non-seasonally adjusted (NSA) estimates. Seasonal adjustment is performed each month and reviewed each year, using the standard, widely used software, X-13-ARIMA-SEATS. Before adjusting for seasonality, prior adjustments are made for calendar effects (where statistically significant), such as returns that do not comply with the standard trading period (there is more information in the Methods, Calendar effects section), bank holidays, Easter and the day of the week on which Christmas falls.

The data collected from the retail sales survey estimate the amount of money taken through the tills of retailers; these are non-seasonally adjusted data. These data consist of 3 components:

- “trend” which describes long-term or underlying movements within the data
- “seasonal” which describes regular variation around the trend, that is, peaks and troughs within the time series (the most obvious is the peak in January and the fall in February)
- “irregular” or “noise”, for example, deeper falls within the non-seasonally adjusted series due to bad weather impacting on retail sales

To ease interpretation of the underlying movements in the data, the seasonal adjustment process estimates and removes the seasonal component. It leaves a seasonally adjusted time series made up of the trend and irregular components.

In the non-seasonally adjusted RSI we see large rises in January each year and a fall in the following February, but these are not evident in the seasonally adjusted index. This peak in January is larger than the subsequent fall, but the trend and irregular components in both months are likely to be similar. This means that the movements in the unadjusted series are almost completely a result of the seasonal pattern.

13. Background notes

1. What's new

The results of the seasonal adjustment review will be incorporated into the estimates for September 2016 to be published on 20 October 2016. This is to allow for further quality assurance to be undertaken.

We have introduced electronic data collection for approximately 10% of the retail sales sample in August 2016.

2. Understanding the data

i. [Quick Guide to the Retail Sales Index](#)

ii. Interpreting the data

The Retail Sales Index (RSI) is derived from a monthly survey of 5,000 businesses in Great Britain. The sample represents the whole retail sector and includes the 900 largest retailers and a representative panel of smaller businesses. Collectively all of these businesses cover approximately 90% of the retail industry in terms of turnover.

The RSI covers sales only from businesses classified as retailers according to the [Standard Industrial Classification 2007 \(SIC 2007\)](#), consistent with the international [NACE Rev 2](#) classification of industries. The retail industry is division 47 of the SIC 2007 and retailing is defined as the sale of goods to the general public for household consumption. Consequently, the RSI includes all internet businesses whose primary function is retailing and also covers internet sales by other British retailers, such as online sales by supermarkets, department stores and catalogue companies. The RSI does not cover household spending

on services bought from the retail industry as it is designed to only cover goods. Respondents are asked to separate out the non-goods elements of their sales, for example, income from cafes. Consequently, online sales of services by retailers, such as car insurance, are also excluded.

The monthly survey collects 2 figures from each sampled business: the total turnover for retail sales for the standard trading period, and a separate figure for internet sales. The total turnover will include internet sales. The separation of the internet sales figure allows an estimate relating to internet sales to be calculated.

III. Definitions and explanations

The “value” or current price series records the growth of the value of sales “through the till” before any adjustment for the effects of price changes.

The “volume” or constant price series are created by removing the effect of price changes from the value series. The Consumer Prices Index (CPI) is the main source of the information required on price changes. In brief, a deflator for each type of store (5-digit SIC) is derived by weighting together the CPI components for the appropriate commodities, the weights being based on the pattern of sales in the base year. These deflators are then applied to the value data to produce volume series.

The “implied deflator” or “the estimated price of goods” is derived by dividing the non-seasonally adjusted value and volume data to leave a price relative. In general, this implied price deflator should be quite close to the retail component of the CPI. More information on the implied price deflator can be found in the [Quick Guide to Retail Sales](#).

iv. Use of the data

The value and volume measures of retail sales estimates are widely used in private and public sector organisations, both domestically and internationally. For example, private sector institutions such as investment banks, the retail industry itself and retail groups use the data to inform decisions on the current economic performance of the retail industry. These organisations are most interested in a long-term view of the retail sector, taken from the year-on-year growth rates. Public sector institutions use the data to help inform decision and policy making. They tend to be most interested in a snapshot view of the retail industry, which is taken from the month-on-month growth rates.

In a recent survey users found the Retail Sales Index statistics important to their work. It was found crucial for financial modelling of sectors and recognised as a timely indicator for the economy. It has been used as a comparative tool with BRC and other market sources to boost context. Practically, it has been utilised as a comparative tool for business performance and the ability to access internet retail sales has been particularly beneficial to some. On a non-industry level, the RSI was perceived as important for informing political opinions or simply for curiosity by individuals who were not necessarily utilising it as a reference for work purposes.

The Retail Sales Index feeds into estimates of GDP in 2 ways. Firstly, it feeds into the services industries when GDP is measured from the output approach. Secondly, it is a data source used to measure household final consumption expenditure, which feeds into GDP estimates when measured from the expenditure approach.

The data feed into the [first \(or preliminary\) estimate of GDP](#), the [second estimate of GDP](#) and the third estimate, published in the [quarterly national accounts](#).

3. Relevant links

A [subset of the retail sales dataset](#) will be published on our [explorable datasets](#) page. Please note the link will not work until the data are published.

Estimates in this table have been produced by combining a breakdown of commodity sales from 31 large retailers with total sales from other retailers.

The monthly periods consist of 4 weeks except for March, June, September and December which are 5 weeks. January 2014 is also a 5 week period.

The quarterly indices are the weighted averages of the monthly indices for the months within the quarter, the weights being the number of weeks in each monthly period.

1 The Food, drink and tobacco category, Household goods category and Other non-food category include revisions to the commodity classifications provided by respondents.

Historical data have been revised due to classification changes introduced from the January 2010 release due to the removal of repair from the classification.
